### How to record a video.

Last Revised: 2014-04-25 18:41:36

To record a video, you can follow the steps below:

1. Click the **Start** menu on the desktop, then go to **All Programs>Wondershare>Video Converter Ultimate** to activate the **Wondershare Video Recorder** function. Alternatively, you can press the **Windows Key** on your computer to open the **Start** menu and enter **Wondershare Video Recorder** to search for it.

If you are using Win8 system, you can check the small video below to find the **Start** menu.

[http://www.ehow.com/video\\_12253455\\_start-screen-windows-8.html](http://www.ehow.com/video_12253455_start-screen-windows-8.html)

2. Play the video you want to record in a media player and make sure it has audio at the beginning. If the video you want to record is an online video, restart the browser to play it online smoothly. Then a **REC** button will show on the left- top corner of the playing window.

3. Click the **REC** button, the program will start to record the video automatically. After it has finished, the program will open up an output folder where you will see the recorded video.

**Note:** The format of the recorded file is WMV by default. If you want to change it to another format, you will need to load the recorded video to the program and then convert it.

Here is the video guide: <http://youtu.be/kPEPUIGFNn8>

#### Tips:

1. Press **F10** to stop the recording. Extend the functions after the **Retake** option and you can find the option to stop the recording automatically after a scheduled time.

2. The recorded video sound volume is dependant on the original volume of the playing video.

3. The default directory for recorded videos is D:\my Documents\Wondershare Video Converter Ultimate\Output\Download .

Is this information helpful?  Yes  No
